## ETHYLENE COPOLYMER

## ABSTRACT

An object of the present invention is to provide an ethylene- $\alpha$ -olefin copolymer excellent in extrusion molding processability and in the balance between the appearance and impact strength. This object is achieved by a copolymer of ethylene and  $\alpha$ -olefin of from 4 to 20 carbon atoms having melt flow rate (MFR; unit is g/10 minutes), melt tension at  $190^{\circ}$ C (MT; unit is cN), intrinsic viscosity ([ $\eta$ ]; unit is dl/g), the chain length A and characteristic relaxation time at  $190^{\circ}$ C ( $\tau$ ; unit is sec) which satisfy the specific relations.
